

ABSTRACT OF THE DISCLOSURE

The invention of Thermoplastic Insole is orderly
composed of polyethylene layer, thermoplastic layer
5 and surface-clothing layer from bottom to the top.
Meanwhile, the thermoplastic layer is produced and,
proportionately blended by vinyl acetate,
thermoplastic rubber, plasticizer and processing agent.
User may use the foot to press on such insole while
10 it turns into soft status after heating, furthermore,
the shape will form after cooling and perfectly fit
the user's foot, hence the individual insole leads
highly comfortable feeling.
